

VMF™

Vertical Mount Fixture Kit

Vertical Mount Fixture Kit for IQAir® Filtration Devices

Technical Specifications

Vertical Mount

Material: 1/16" (1.5 mm) steel, white powder coated
Measurements: H 23.6" x W 16.1" x D 15.2"
(H600 mm x W 410 mm x D385 mm) 6.7 kg (14.7 lbs.)

IQAir Compatibility

Compatible with all IQAir filtration devices.
Not compatible with the accessories MaxVac,
FlexVac, InFlow W125 and Mobility 56.

The *VMF* kit allows you to mount an IQAir filtration device on virtually any structurally sound vertical surface. The *VMF* kit is compatible with all IQAir models and is designed to compliment the elegant IQAir look.

The vertical mounting of an IQAir unit may be desirable in areas where floor space is scarce or the unit would present an obstacle. The vertical mount may also improve the air cleaning performance of an IQAir device. Air pollutants with a rising flow pattern, such as tobacco smoke, are captured more quickly by positioning the device higher in the room.

Vertically mounting an IQAir unit emulates the effect of a fume hood. If directly mounted above an air pollution source, the IQAir filtration device helps to capture rising dust, fumes or vapors.

The *VMF* kit is designed so that all filters are fully serviceable while the IQAir filtration device remains wall mounted. The removable bottom grille allows easy filter replacement even when the PF40 coarse dust pre-filter accessory is used.

The *VMF* kit includes six universal wall plugs and screws suitable for concrete, brick or dry wall. The wide spread of the fixture points allows for optimum weight distribution on the wall. A locking mechanism ensures that the air filtration unit remains safely fixed in the wall mount.

The power cord is connectable to the air cleaning unit on either side of the vertical mount.

The remote control, which is supplied with each IQAir filtration unit, ensures convenient operability even when the control panel is out of reach.
